

Post- Op Care for All Implant Patients

Please inform dentists or physicians before receiving potentially contaminated treatments (deep dental work: periodontal cleanings, root canals, dental abscesses, oral surgery; gastrointestinal or gynecological surgery, etc, call if any questions) that you need antibiotics to prevent infection.

CIPRO 500mg po bid x 3, begin the night before procedure.

If allergic, KEFLEX 500 mg po bid x 3 begin the night before procedure.

Patient needs to call our office if allergic to both.

Also, DO NOT let an infection linger in the body without seeking attention (sinusitis, bronchitis, pneumonia, etc.) as this rarely can cause implant infection.

****Please do not hesitate to call our office at 770.393.9000 for any questions or concerns.**
